

Steel barricades

Effortless ^{Assembly}

We carry a complete line of crowd control barricades for special event use. Depending on your specific needs, choose between our models. Barriers are ideal whenever high quality, attractive and durable crowd control is required.

Our barricades range from 3.5' - 8' and can be effectively used as bicycle barricades or pedestrian barricades. These are free standing panels and are, therefore easy to use and can be placed wherever required.

Our barricades can be relocated in minutes. This gives you the opportunity to quickly redirect foot traffic or reconfigure an area at any time, without stopping what is happening around you. Since you do not need to drill holes into the floor, it is possible to use these barricades on concrete, mud, tiles or wherever with ease.

Our hot-dipped galvanizing provides superior weather protection and allows for permanent outdoor storage. Can be used with other barricades of the same model. Available in bridge foot or flat foot legs.

Offset Foot

Ideal for straight stacking. Perfect for loading in a pick-up truck. Ideal for events on grass, soft or uneven surfaces. The offset style foot provides maximum stability for the barricade.

The offset foot design provides the best resistance to pushing by crowds, making it ideal for use at events such as parades, etc.

8' Offset Steel Barricade

Height: 44"

Length: 98"

Frame tube diameter: 1.50"

Vertical bars diameter: 0.650"

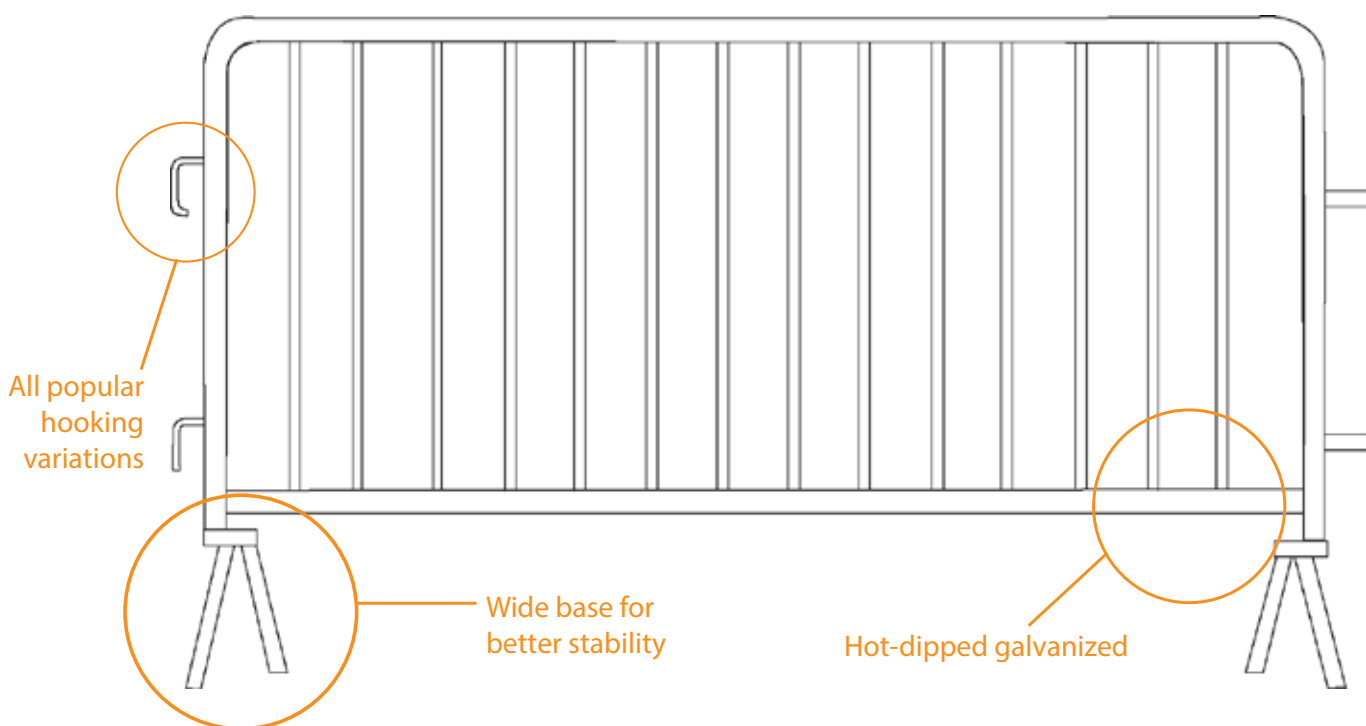

Weight: 44 lbs

Offset foot width: 16"

Item #: UF-5045

Advantages:

- Bolt-on bases
